30 YEARS OF INNOVATION

NANO TECHNOLOGY AND YOUR ENGINE

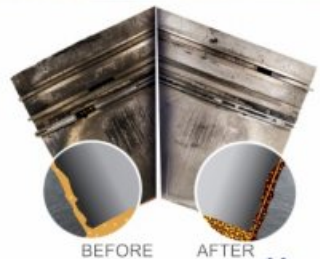

Nano-technology refers to the production of advanced materials at the scale of about 1 to 100 nanometers, almost as small as individual atoms and molecules. Manipulating materials at this scale has the potential to lead to stronger, more durable and more sustainable components without compromising weight and flexibility.

**ENGINE WEAR REDUCED BY 5 TIMES.
USURE DU MOTEUR RÉDUITE DE 5 FOIS.**

Better Engine Durability

Compared to engines from older times, present day ones are already smaller, lighter and can produce almost twice the amount of horsepower and torque. However, the down sides are still heat and friction. The infusion of nano-materials in lubricants formulation will reduce friction, engine wear and oil burn ultimately protecting, preserving and prolonging the life of the engine.
